

Hospitality

KreaPOS Hospitality® Professional

Is an ideal solution for restaurant management and franchise food service chains; complete with detailed sales reports, and inventory controls. Whether you are running a fine dining restaurant, a quick service chain or even a high volume bar, KreaPOS® software can be configured to meet your needs.

Cost Effective

With greatly reduced cost, KreaTeck® provides a complete store package within your budget. Unlike other programs that charge you extra for additional features, Kreateck prides themselves in selling solutions with no hidden costs.

Easy and Intuitive

KreaPOS® is designed to be easy-to-use and intuitive, allowing your server extra time to enhance your patron's dining experience. Our software features an innovative user-centered interface, with bold and eye catching graphics, that will improve the users' experience and interaction. All KreaPOS® screens are self-explanatory and require minimal training. Its unmatched reliability, remarkable flexibility and unprecedented ease-of-use sets a new standard for POS software.

One Solution

KreaPOS® is an ideal for a wide range of food service businesses: Table Service, Quick A Service, Home Delivery, Bars and Cafeterias. It's specially suited for "mixed" environments for a business offering table service, carry-out, home delivery, cafeteria services, and mini-market all from the same location.

Client Server Architecture

KreaPOS® Professional is designed under a fail prove and secure client-server architecture.

On Demand Technology

Obtain reports on demand without the need of waiting for a special process to complete at the end of the day. All information that is input can be retrieve as your store operates.

Internet Ready

Connect your system to the internet and access your store from anywhere around the world. With KreaTeck® technology you can operate your store remotely, add new items, check inventory, change prices and more.

Wireless Network Ready

Because KreaPOS® Professional is designed to work under very low speed thanks to our latest innovation and state-of-the art server, our application will work seamless in any network environment including wireless networks.
